

## Overview

We have advised on power generation projects (including the drafting and negotiation of power purchase agreements), mining and infrastructure projects, rail and transport projects, and undersea and terrestrial cable projects. We regularly advise on both the conventional power sector and the fast-growing renewable energy sector. Our lawyers keep abreast of changes in legislative and regulatory requirements in these sectors in order to advise our clients on regulatory compliance.

We also have expertise in energy litigation and arbitration and have represented the key energy firms in Kenya in all dispute resolution fora in Kenya.

## Representative Experience

- **Confidential client:** Acting as local counsel to the sponsors in the financing of the first private sector greenfield geothermal development in Sub-Saharan Africa.
- **Confidential client:** Acted as the legal advisor to a company on the establishment of a special economic zone in Eldoret, Kenya. This project is the first privately owned special economic zone in Kenya.
- Advised on a World-Bank-funded institutional review of all petroleum and non-petroleum institutions involved in the oil and gas sector in Kenya. This study was significant as it sought to identify gaps and weaknesses in the institutional framework governing the oil and gas sector and provide the requisite solutions.
